

PROTECTOR FILTERS FOR AIR INTAKE SYSTEMS

- Galvanised Metal Frames
- Choice of depths from 1" to 4"

- Choice of density for different rates of airflow

Direct from the manufacturers:

Scottex Precision Textiles Ltd, a family owned and run manufacturer of filter products was founded in 1979 and has grown to be one of the U.K's leading producer of filters.

The **Protector** range of pre-filters for air intake systems. These have a galvanised metal case and the filtration comes in the form of variable depth and density Polyester pads, which are disposable. These are designed to stop and hold large volumes of large particle dust, whilst allowing the fine dust through to the second stage filtration, which would either be a pleated panel filter or a bag filter.

The Metal Cases are either 1", 2", 3" or 4" in depth and can be any width and length.

Common sizes are 12" x 12" or 24" x 24".

We give experienced cost effective solutions to solve today's air filtration problems. This includes evaluation, samples and after sales advice and technical assistance.

For larger extraction systems we also offer a fitting service for the removal of old filters and replacement of new filters. No job to big or small and we cover the whole of the UK.

Contact Scott Parkinson on 0161 763 6550 for further information and prices on new filters.
